

# Void Pantograph Options

**Madison Forms** offers you more choices for **Void Pantographs**.

With a large selection of patterns and an even larger selection of colors, we're sure that you'll be pleased with our collection of void pantographs.

Shown here are some examples of colors that work exceptionally well with void pantographs.

A word of caution though. Not all ink colors will work with void pantographs. While dark ink colors normally work better, not all will. Reflex blue would be an example of a dark color that does not work well as a void pantograph. Metallic, Fluorescent, and most Pastel (colors composed mostly of white ink) colors don't work well either. As a result, we do not recommend using spot ink colors with less than 2 parts (13%) black ink in it's mix since this will create a less effective void pantograph
